Professional Summary

B.Tech Computer Science (AI & ML) graduate with strong foundations in data collection, cleaning, exploratory data analysis (EDA), statistical modelling, and predictive analytics. Proficient in Python, SQL, and Power BI with hands-on project experience identifying trends and patterns from real-world datasets. Eager to apply data analytics skills to deliver actionable business insights.

Education

Bachelor of Technology – Computer Science (Artificial Intelligence & Machine Learning) May:2026
— Jawaharlal Nehru Technological University Hyderabad, Wanaparty
CGPA: 8.04

Technical Skills

- **Data Analytics:** Data Collection, Data Cleaning & Preprocessing, Exploratory Data Analysis (EDA), Statistical Analysis, Predictive Modelling, Trend & Pattern Identification
- **Programming:** Python (Pandas, NumPy, Scikit-learn, Matplotlib, Seaborn), Java, SQL, MySQL
- **Frameworks & Tools:** FastAPI, REST APIs, Web Scraping (BeautifulSoup/Scrapy), Power BI, Git

Projects

Sales Performance Analysis [Link](#)

Python, Pandas, Matplotlib

- Collected and preprocessed raw sales datasets, handling missing values and inconsistencies to ensure data quality for downstream analysis
- Performed exploratory data analysis (EDA) to uncover sales trends, seasonal patterns, and revenue drivers across product categories
- Built visualisations using Matplotlib to present revenue insights and performance comparisons, enabling data-driven business decisions

Expense Tracker REST API [Link](#)

Python, FastAPI, MySQL

- Developed a RESTful API using FastAPI and MySQL to manage expense transactions with full CRUD operations and input validation
- Designed a normalised MySQL schema for efficient transaction tracking and structured querying of financial data
- Implemented data validation logic to ensure clean, consistent data entry — directly supporting reliable downstream analytics

Web Scraping and Data Extraction Tool [Link](#)

Python, BeautifulSoup/Scrapy, Pandas

- Built an automated web scraping tool to collect structured data from multiple online sources, replacing manual data gathering processes
- Cleaned and preprocessed extracted data using Pandas, resolving format inconsistencies and duplicates to produce analysis-ready datasets
- Exported processed data for statistical analysis and visualisation, supporting trend identification and pattern recognition workflows

Certifications

- **Power BI Workshop** – Data visualisation, interactive dashboards, and business intelligence reporting
- **B.Tech AI & ML Coursework** – Statistics, Probability, Database Management Systems, Data Structures, Machine Learning

Core Competencies

Data Collection | Data Cleaning & Preprocessing | Exploratory Data Analysis (EDA) | Statistical Analysis | Predictive Modelling | Trend Identification | Pattern Recognition | Python | SQL | Power BI | Data Visualisation | Machine Learning | REST APIs | MySQL | Web Scraping | FastAPI
